NEW

Diabetic skin

Current studies show: The dry skin of people with diabetes not only lack lipids and moisture, but its barrier function is also impaired. This makes it easier for pathogens to penetrate the skin – thus the risk of infection increases, particularly on the feet.

Hence the need for Allpresan® diabetic foam creams

The Allpresan® Diabetic foam creams formulated for diabetic care offers reparative benefits. They also contain biomimetic lipids: like the skin's own lipids, these fit precisely into the gaps in the damaged skin barrier and repair them within just 4 weeks*.

In addition, moisturizing factors replenish the skin's moisture levels, enhancing elasticity and promoting noticeably more supple feet. Thanks to the special foam-cream formula, the products are easy to spread, and are quickly absorbed and do not leave an unpleasant greasy film.

ALLPRESAN® DIABETIC FOAM CREAM
Medical Skincare

Best for very dry to cracked & sensitive skin:
INTENSIVE + REPAIR without urea

Best for very dry to cracked skin:
INTENSIVE + REPAIR with urea
INTENSIVE + REPAIR with urea + with soothing scent

- 8 % Urea.
- 5% Glycerine & 5% Panthenol.
- Allantoin, & Biomimetic Lipids.
- Patented Allpresan Skin-Repair Technology, which strengthens the physiological skin barrier so that moisture cannot escape.
- Intensively supplies the skin on the feet and legs with lipids and moisture.

User Trial:

Result of subject using Allpresan® Diabetic INTENSIVE + REPAIR with urea + with soothing scent for 1 week.

Before

After 1 Week

"The foam is lightweight and has a floral scent, a little goes a long way. My cracked heels looked visibly better within a week. I didn't expect the marks on my feet to get lighter, which made me very happy. I am very happy with the overall results of this product." Dimpho Makate

Even though Allpresan® Diabetic Foam Cream was developed for people with diabetes, it can be used by anyone with dry skin and use is not limited to feet, it can be used on the hands and body.

What makes our foam creams so special?

Allpresan® Foam Creams

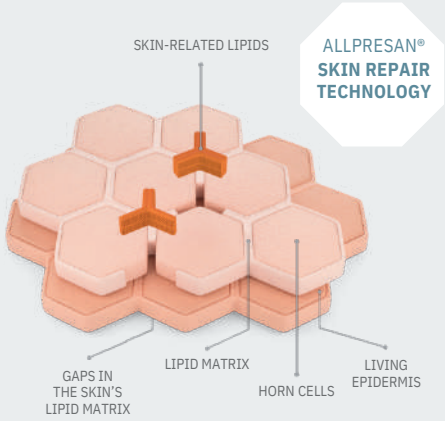

- Each formulation combines the benefits of a lipid-rich emulsion with the distinctive, effortless spreadability of a foam.
- Absorbed in seconds, are non-greasy and are up to twice as effective as comparable creams (emulsions).
- Forms a breathable protective net on the skin, while protecting the skin from external influences without restricting its natural functions.

Foam creams with REPAIR effect

An intact skin barrier on the feet fulfills an important role in protecting against harmful microorganisms that can cause infections or athlete's foot. However, even with dry skin, the skin barrier has gaps due to a lack of lipids. To close these gaps in the skin barrier and restore the skin's natural protective function, biomimetic lipids are used in Allpresan® foam creams. The biomimetic lipids fit into the gaps in the lipid barrier of dry skin like precisely fitting pieces of a jigsaw puzzle.

Allpresan® Skin Repair Technology: Reinforcement for the skin barrier

Allpresan® Skin Repair Technology provides effective skin protection, nourishment, and intensive moisture. A special feature is the biomimetic lipids, that imitate the skin's natural lipid barrier, closing the gaps in the barrier of dry skin.

Like perfectly-fitting jigsaw puzzle pieces, the skin-related lipids place themselves in the gaps of the damaged skin barrier.

VEGAN · CRUELTY FREE · WITHOUT MICROPLASTICS · MADE IN GERMANY TRUSTED BRAND · SCIENTICICALLY APPROVED

Before Allpresan® Skin Repair Foams

Gaps in the skin's lipid matrix allow microbes and other stressors to enter.

With Allpresan® Skin Repair Foams

Skin-related lipids fill the gaps in the damaged lipid matrix.

The original protective barrier is restored, which promotes regeneration of new skin.

Scientific studies prove: Foam creams based on Allpresan® Skin Repair Technology can restore a healthy skin barrier within just 4 weeks.

Superior Yield

General tips for foot care

To keep your feet in good condition, follow these basic guidelines:

- Clean your feet daily using a mild soap, and ensure they are thoroughly dried, including between the toes.
- Moisturize your feet after washing by applying Allpresan® Foam Cream. Use it in the morning and before bed for best results.
- Alternate your shoes each day, and consider using a shoe spray after wearing them to maintain freshness.
- Trim toenails straight across, not in a rounded shape, to prevent issues and ensure proper nail protection.
- Consult a podiatrist if you experience persistent foot problems or notice changes in your nails.
